

Features you need Performance you expect

Since a great tractor is the sum of its parts, we focused on perfecting the details when we designed the 20C and 25C Standard Compact Utility Tractors. While we're proud of the results, you should see them for yourself. So go ahead, climb onto the operator station to observe how we took your comfort into

consideration. Check out the ROPS to note why safety is a top priority. Start the engine to experience the difference a little extra horsepower can make. These are only a few of the features you'll appreciate on the 20C and 25C – and the rest are just as impressive.

Key Features

- High powered engines with 18.8 hp/24.1 hp
- Durable axles for added reliability

- Narrow compact design to boost versatility
- Faster ground speeds

Wide operator station and flat foot deck. Enjoy extra legroom and easy on/off access with a clean, ergonomic design.

8x8 gear transmission. Access levers easily for an enhanced driving experience – you'll love the added control and comfort.

Standard foldable mid-mount ROPS. Leave it up for safety or fold it down to get the clearance you need.

More horsepower. Increase ground speeds to get the job done faster and more efficiently thanks to a high performance engine.

Low noise and vibration. Since the engine and the operator station is rubber isolated, the noise level as well as the vibration is low.

High rear hitch lift capacity. With 600 kg lift capacity there is almost no limit to handle attachments.
